LAB REPORT on

Artificial Intelligence (23CS5PCAIN)

Submitted by

Dama Yohitesh Naveen Sai (1BM23CS085)

in partial fulfillment for the award of the degree of

BACHELOR OF ENGINEERING

in

COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING

(Autonomous Institution under VTU)

BENGALURU-560019

Aug-2025 to Dec-2025

B.M.S. College of Engineering,
Bull Temple Road, Bangalore 560019
(Affiliated To Visvesvaraya Technological University, Belgaum)
Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled “Artificial Intelligence (23CS5PCAIN)” carried out by **Dama Yohitesh Naveen Sai (1BM23CS085)**, who is bonafide student of **B.M.S. College of Engineering**. It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum. The Lab report has been approved as it satisfies the academic requirements in respect of an Artificial Intelligence (23CS5PCAIN) work prescribed for the said degree.

Swathi Sridharan Assistant Professor Department of CSE, BMSCE	Dr. Kavitha Sooda Professor & HOD Department of CSE, BMSCE

Implement Tic Tac Toe Game

LAB-1

L=TTT

DATE: 21/01/25 PAGE: 01

The task the Algorithm:-

1 2 3
4 5 6
7 8 9

Step (1): Create an 2-D array. let arr[3][3]

Step (2): declare using switch case like if user enters a number, the allocation in the array should be listed.

like 1 → arr[0][0], 2 → arr[0][1], 3 → arr[0][2],
4 → arr[1][0], 5 → arr[1][1], 6 → arr[1][2],
7 → arr[2][0], 8 → arr[2][1], 9 → arr[2][2].

Step (3): The system will ask the user to choose 'X' or 'O'.

Step (4): then after the choice, system asks the user to choose a number to play the first move.

Step (5): let the system play the first move randomly.

Step (6): Ask user to choose another number.

Step (7): Now use if conditions to check the array thoroughly to check the two corresponding locations to not allow user to cross 3 consecutive letters.

like $((arr[0][0] \neq arr[0][1]) \vee (arr[0][0] \neq arr[0][2]) \vee (arr[1][0] \neq arr[1][1]) \vee (arr[1][0] \neq arr[1][2]) \vee (arr[2][0] \neq arr[2][1]) \vee (arr[2][0] \neq arr[2][2]))$

and see which condition holds true and place the computer's choice between them.

Step (8): After user input goes back to step (6).

Step (9): continue and check if the step (7) doesn't hold true, system plays a random move.

Step (10): The initial values in array will only be changed once. So, the no one is allowed to choose the same position again.

Step (11): Define the win conditions and keep checking after every move.

Step (12): check the array if its full or not.

Step (13): Decide winner, if array is full without winner then it's a draw.

Step (14): if the step (11) holds true, decide the winner.

DATE PAGE 02

X → user

O → AI

Example

0	X	0
X	0	X
X	0	X

Enter command: left
Already at the leftmost room!
[R:dirty] [B:dirty]

Enter command: right
[A:dirty] [R:dirty]

Enter command: clean
Cleaned B
[A:dirty] [R:clean]

Enter command: left
[R:dirty] [B:clean]

Enter command: clean
Cleaned A
[R:clean] [B:clean]

🏆 All rooms are clean!

```

Program-03

Implement 8 Puzzle

Algorithm:

LAB-3

Q. Vacuum Cleaner:

Algorithm:

Step 1: Design a huge mom grid for the robot to move and clean.

Step 2: Initialize all the places in the board with 0.

Step 3: Consider the initial position of vacuum cleaner to be (0,0).

0	0	0	0
0	0	0	0
0	0	0	0
0	0	0	0

(or)

0	0
0	0

2x2 grid, cleaner at (0,0)

mom grid, vacuum cleaner is at (0,0)

Step 4: There are 4 ways to move (left, right, up, down) so first initialize horizontal axis as 'x' and vertical axis as 'y'.

Step 5: So, the robot can move in 4 directions,

left $\rightarrow x-1$; up $\rightarrow y-1$

right $\rightarrow x+1$; down $\rightarrow y+1$

Step 6: Call the recursion function to check for the boundary conditions, $x < n-1$, $y < n-1$, $x \geq 0$ and $y \geq 0$

Step 7: The robot stops its process once all the boxes in the grid are covered i.e., all the indexes of the grid are visited.

Output:

1	2
3	4

1, 2, 3, 4 are rooms

and these are two states

clean / Dirty

the cleaner will check for the dirty room and visit it.

If all the rooms are clean, the process stops.

1	2
dirty 3	4

Moves = 1

cleans room 3 and marks it clean

Then check if all the rooms are clean,

Since they are clean, the process is stopped.

Best case:

1	2
3	4

All the rooms are clean

Moves = 0.

Worst case:

1	2
dirty 3	4

1	2
dirty 3	4

1	2
dirty 3	4

cleans room 3 and ends process

Moves = 3

Average case:

1	2
dirty 3	4

Moves = 1

Code:

```

Implement IDDFS

Algorithm:

Q. Iterative Deepening DFS Algorithm (IDDFS)

Algorithm

1. Initialize variables to indicate the graph, start node and goal Node, and the actual/max depth of the graph.
Graph: G Max Depth = m
Goal Node: g
Start Node: s
2. Make the graph or import a predefined graph and assign to G.
3. We need to set the depth till which we need to search, it can vary continuously or a fixed, ~~per~~ based on the user.
4. Perform Depth limited Search (DLS) from start node, in the defined depth limit.
5. If the goal is found within the limit, return path & solution. Else, if the limit can be changed, increment the limit by 1 and repeat step (4) or return that the output was not found.

NOTE: Since IDDFS is combination of DFS and DLS, DLS is performed on every node horizontally within the limit.

6. If the goal is found, return the path and solution along with limit, else if the graph size is exceeded and output is not found, return failure.

The given max depth = 3.

In ~~tree~~ depth = 0, A → Not goal ^{node} state so depth ++

In depth = 1, ABC → No goal node so depth ++

depth = 2, ~~DEFC~~ → Found goal, return the Node

ABDECFA

and path.

ABDECFA

Implement Hill climbing algorithm using N-Queens

DATE: 9/11/21 PAGE: 6

LAB-5

① Hill Climbing Algorithm

• Algorithm

- 1) We should start with an initial solution 'S'
- 2) The required objective function $f(S)$ should be evaluated.
- 3) We need to repeat this step until the required stopping condition is reached:
 - <i> All the possible neighbouring solutions should be generated for S
 - <ii> Select the neighbouring solution of S which has the highest value of $f(S')$
 - <iii> if $f(S') = f(S)$
 stop (S is the local optimum)
 else
 set $S = S'$ (updating the solution)
 - <iv> Return the best solution S.
- 4) End the process and show the output if the required needs are met.

Creative knowledge based using propositional knowledge and show the given query entries a knowledge based or not

Algorithm:

LAB-07 DATE: 11/10/23 PAGE: 23

Q1) Create a knowledge base using Propositional logic and test entailment.

1) Identify all atomic propositions in KB and Query.

Goal $\rightarrow$ Knowledge base (KB) using propositional logic sentences.

$\rightarrow$ Given a query check whether the query is entailed by KB.

Input

KB = Propositional logic sentences
Query = Propositional logic formula

Output

True if KB entails query, else False.

Begin

Props $\leftarrow$ extract all atomic propositions from KB and Query.

All Assignments $\leftarrow$ generate all combinations of truth values and queries.

For assignment in All Assignments do evaluate all sentences in KB under this assignment

if all sentences in KB are true

Evaluate Query under this assignment

if Query false

return false

end if

end if

else for

return True

true

end

Q2) Construct a truth table that shows the truth value of each sentence in KB and indicate the models in which the KB is true.

(i) Truth Table KB ($P \rightarrow \neg Q, R \rightarrow P \wedge Q \vee R$)

P	Q	$R \wedge Q$	$R \rightarrow P$	$P \rightarrow \neg Q$	$Q \vee R$	KB
F	F	F	T	T	F	F
F	F	T	T	T	T	T
F	T	F	F	T	T	F
F	T	T	F	T	T	F
T	F	F	T	T	F	F
T	F	T	T	T	T	T
T	T	F	F	F	T	F
T	T	T	T	F	T	F

(ii) KB entails R.

KB Models KB ($P \rightarrow \neg Q, R \rightarrow P \wedge Q \vee R$) R.

Model	KB	R
1	F	F
2	T	T
3	F	F
4	F	T
5	F	F
6	T	T
7	F	T
8	F	T

$\therefore$ KB entails R

DATE _____ PAGE 35

(iii) KB entails $R \rightarrow P$

Model	KB	$R \rightarrow P$
1	F	T
2	T	F
3	F	T
4	F	F
5	F	T
6	T	T
7	F	T
8	F	T

Model 2 is not true.
 $\times$ KB does not entail $R \rightarrow P$
 $\therefore$ KB does not entail $R \rightarrow P$

(iv) KB entails $Q \rightarrow R$

Model	KB	$Q \rightarrow R$
1	F	T
2	T	T
3	F	F
4	F	T
5	F	T
6	T	T
7	F	F
8	F	T

Model 2 is true.
 Model 6 is true.
 $\therefore$ KB entails $Q \rightarrow R$

NOTE:
 KB and α entail when only for every T in KB there exists a T in α if T and F occurs it doesn't entail.

Program-08

Implement unification in first order logic

Algorithm:

LAB-8

DATE: 20/10/20 PAGE: 23

Q. ① $P(f(x), g(y), y)$
 $P(f(g(z)), g(f(a)), f(a))$

② $Q(x, f(x))$
 $Q(f(y), y)$

③ $P(x, g(x))$
 $P(g(z), g(g(z)))$

- Unification Algorithm

Step ①: Take 2 set of equations $P = \{P_1, P_2, \dots\}$
 Substitute $\sigma = \emptyset$ (empty)

Step ②: Repeat until P is empty.
 Pick an eqn (P_i) from P

Step ③: Simplify the eqn
 if $P = Q$
 remove it from E (its already unified)

Step ④: variable case
 if P is a variable
 if P occurs in Q FAIL (occurs check)
 else, substitute P and Q everywhere in P and Q
 add substitution P/Q to σ .
 else if Q is a variable
 Do the same steps as above (swap roles of P & Q).

Step ⑤: Function / compound term
 if both P and Q are compound
 if they have diff function symbols or diff arities $\rightarrow$ FAIL
 else, break into pairs of their corresponding arguments and add them to P .

Step ⑥: Failure condition
 if none of the above applies (mismatch) $\rightarrow$ FAIL

Step ⑦: Finish
 When P becomes empty,
 the substitution set σ is the most general unifier (MGU)

① $P(f(x), g(y), y)$ $P(f(g(z)), g(f(a)), f(a))$

① $f(x) = f(g(z))$
 $\sigma_1 = x \leftrightarrow g(z)$

② $g(y) = g(f(a))$
 $\sigma_2 = y \leftrightarrow f(a)$

③ $y = f(a)$
 No new info

④ MGU, $\sigma = \{x \leftrightarrow g(z), y \leftrightarrow f(a)\}$

unifiable ✓

$$(2) \quad a(x, f(n))$$

$$a(f(y), y)$$

$$x = f(y)$$

$$f(n) = y$$

$$f(f(y)) = y$$

Program-11

Convert the given first order logic statement to conjunctive normal form (CNF)

Algorithm:

LAB-10

Resolution in FOL

Algorithm
Basic steps to prove a conclusion S given premises

Premises: Premise 1
(all expressed in FOL)

- (i) Convert all sentences to CNF
- (ii) Negate conclusion S & convert result to CNF
- (iii) Repeat until contradiction or no program is made:
 - (i) Select 2 clauses (all other parent clauses)
 - (ii) Resolve them together, performing all required unifications
 - (iii) If resultant is the empty clause, a contradiction has been (ie S follows from the premises)
 - (iv) If not, add resultant to premises

Proof by Resolution

6. Given the KB or Premises

- (i) John likes all kinds of food.
- (ii) Apple and vegetables are food.
- (iii) Anything anyone eats and not killed is food.
- (iv) Ail eats peanuts and still alive
- (v) Honey eats anything that Ail eats
- (vi) Anyone who is alive implies not killed
- (vii) Anyone who is not killed implies alive.

Premises

- (i) $\forall x: \text{Food}(x) \rightarrow \text{likes}(\text{John}, x)$
- (ii) $\text{Food}(\text{Apple}) \wedge \text{Food}(\text{Vegetables})$
- (iii) $\forall x \forall y: \text{eats}(\text{Gp2}, x) \rightarrow \text{killed}(x) \rightarrow \text{Food}(y)$
- (iv) $\text{eats}(\text{Ail}, \text{Peanuts}) \wedge \text{Alive}(\text{Ail})$
- (v) $\forall x: \text{eats}(\text{Ail}, x) \rightarrow \text{eats}(\text{Honey}, x)$
- (vi) $\forall x: \text{killed}(x) \rightarrow \text{alive}(x)$
- (vii) $\forall x: \text{alive}(x) \rightarrow \neg \text{killed}(x)$
- (viii) $\text{likes}(\text{John}, \text{Peanuts})$

Resolution steps:

- $\neg \text{likes}(\text{John}, \text{Peanuts})$ and $\text{likes}(\text{John}, x) \rightarrow \text{Food}(x) \vee \text{likes}(\text{John}, x)$
 - $\neg \text{Food}(\text{Peanuts})$ and $\text{Food}(x) \vee \text{likes}(\text{John}, x)$
 - $\text{eats}(y, z) \vee \text{killed}(y) \vee \text{Food}(z)$
 - $\text{eats}(\text{Ail}, \text{Peanuts})$ and $\text{Food}(z)$
 - $\text{killed}(\text{Ail})$ and $\neg \text{alive}(x) \vee \text{killed}(x)$
 - $\text{alive}(\text{Ail})$ and $\text{alive}(\text{Ail})$
 - $\text{Honey eats \& House Peers}$
